QHM6706 – Specification Report Evaluation (in-process)

The screenshot shows the QM+ interface for the 'Project Specification Review & Resubmission' section. The header includes the QM+ logo, navigation links, and a search bar. The main content area displays an announcement from Anum Masood dated Monday, 24 November 2025, 11:16 AM. The announcement text states: 'Dear Final Year Students, Your supervisor is currently grading your Project Specification Report. The grades will be released on QM+ by **Monday, 1st December 2025**. If your grade is **Rejected (Fail)**, please contact your supervisor to discuss how to revise and improve your Project Specification Report. The resubmission on QM+ will open on **Wednesday, 3rd December** and close on **Wednesday, 10th December**. Please note that the Project Specification is a *critical* submission. All students must receive an **Approved (Pass)** status in order to continue with the project. Before resubmitting on QM+, ensure that your revised specification fully addresses your supervisor's feedback and meets the required standard. If your revised specification is rejected again, no further submissions will be permitted on QM+.' The announcement concludes with 'Best regards, Anum'. At the bottom of the announcement, there are links for 'Permalink', 'Edit', 'Delete', 'Reply', and 'Export to portfolio'. The page also features a sidebar with navigation icons and a top navigation bar with links to 'Forum', 'Settings', 'Advanced grading', 'Subscriptions', 'Reports', and 'More'.

Project Specification Review & Resubmission
by Anum Masood - Monday, 24 November 2025, 11:16 AM

Dear Final Year Students,

Your supervisor is currently grading your Project Specification Report. The grades will be released on QM+ by **Monday, 1st December 2025**.

If your grade is **Rejected (Fail)**, please contact your supervisor to discuss how to revise and improve your Project Specification Report. The resubmission on QM+ will open on **Wednesday, 3rd December** and close on **Wednesday, 10th December**.

Please note that the Project Specification is a *critical* submission. All students must receive an **Approved (Pass)** status in order to continue with the project. Before resubmitting on QM+, ensure that your revised specification fully addresses your supervisor's feedback and meets the required standard.

If your revised specification is rejected again, no further submissions will be permitted on QM+.

Best regards,
Anum

Getting Started with Your Final Year Project Early-term Progress Report Webinar

Specification Report
Result release on 1st Dec

FYP – Project Specification Resubmission

- Project are being evaluated by Supervisor (**Approve=Pass/Reject=Fail**). No Scores.
- If your specification is **rejected**, you will be asked to revise until it is approved.
- QM+ submission will re-open on **3rd December** for revised Specification Report
- Project Specification Resubmission Deadline: **10th December 2025**
- Submission of Early-term progress report is not allowed before the approval of the Project Specification report.

QHM6706 – Early-term Progress Report

The screenshot shows a QM6706 forum post titled "Early-term Progress Report Webinar" by Anum Masood. The post is dated Monday, 24 November 2025, at 11:35 AM. It is addressed to "Dear Final Year Students," and announces the next scheduled webinar. The webinar details include the date (Wednesday 26th November 2025), time (14:00 to 15:00 Beijing Standard Time), and a Teams link. The agenda is divided into four sections: Introduction, Conducting a Literature Review, Supervision and Progress Monitoring, and a Question and Answer Session. The post concludes with a note about the availability of the report template and a sign-off from Anum.

Early-term Progress Report Webinar
by Anum Masood - Monday, 24 November 2025, 11:35 AM

Dear Final Year Students,

The next scheduled webinar will be on "Early-term Progress Report". The objective of this webinar is to support your preparation for the early-term progress report, which comprises a structured literature review and a concise summary of your progress to date. Below are the webinar details:

Date: Wednesday 26th November 2025

Time: 14:00 to 15:00 (Beijing Standard Time)

MS Teams Link: QHM6706 - Early-term Progress Report Webinar | Meeting-Join | Microsoft Teams

Agenda for the Webinar on Early-term Progress Report

- 1. Introduction**
 - Overview of the Early-term Progress Report
 - Required content of the report
 - Submission deadline
 - Early-term Progress Report template
- 2. Conducting a Literature Review**
 - Getting started with a literature review
 - Reading and critically evaluating relevant research articles
 - Academic writing for literature reviews
 - Referencing style for Final Year Project reports
 - Additional supporting resources
- 3. Supervision and Progress Monitoring**
 - Minimum number of required meetings prior to the submission of the Early-term Progress Report
 - Maintaining and updating the supervision meeting log
 - Using supervisory feedback to improve Final Year Project reports
- 4. Question and Answer Session**

The early-term progress report template is available for download via QM* (Early-term Progress Report Template). You have to submit your Early Progress Check Report using the template provided, in PDF format. Please refer to the Project Handbook Section 3.3 for more details.

Best regards,
Anum

QHM6706 – Early-term Progress Report Template

The screenshot displays the QHM6706 Project AY 25/26 interface. The top navigation bar includes a hamburger menu, the QM logo, 'All Modules', and 'Help'. A vertical sidebar on the left contains icons for home, calendar, documents, and other functions. The main content area is titled 'QHM6706 Project AY 25/26' and features a tabbed interface with 'Module', 'Settings', 'Participants', 'Grades', 'Reports', and 'More'. The 'Assessments' tab is active, showing a list of submission points: 'Specification Report', 'Supervision Log', and 'Early-term Progress Report'. The 'Early-term Progress Report' is expanded, revealing a template document titled 'Early-term Progress Report Template'. A blue callout box provides the following information:

Deadline: **12-Jan-2026** (23:59 Beijing Standard Time).

Submit your Early Term Progress Report using the template provided, in **PDF** format. Please refer to the Project Handbook *Section 3.3*.

This is a **Turnitin-enabled** assignment. You will obtain a similarity index and an originality report. Please note that the similarity index and originality report are generated immediately after the "first submission".

If you resubmit, you must wait 24 hours (or longer) to see the new index and report.

论文题目 Project Title	Identifying Visual Motor Perception Abnormalities in Major Depressive Disorder (MDD) Patients Using Machine Learning Clustering				
1.1 Situation of Major Depressive Disorder					
Major depressive disorder (MDD) stands out as the most prevalent mental illness globally. The World Health Organization (WHO) estimates that approximately 4.4% of the world's population is grappling with the challenges posed by MDD, solidifying its status as the foremost single contributor to global disability [1]. As a complex mental disorder, MDD exerts a profound impact on the quality of life, creating a ripple effect that extends to day-to-day social interactions and, alarmingly, carries the potential risk of leading to suicide. Moreover, this mental health burden extends beyond the individual level, affecting families, communities, and societies at large. Aware of the seriousness of the consequences, MDD has been consistently ranked as one of the leading causes of disability worldwide [2,3]. This not only emphasizes the sheer magnitude of its impact but also underscores the urgent need for comprehensive research, effective interventions, and heightened awareness to address the far-reaching implications of this pervasive mental health challenge. This widespread condition manifests through a varied spectrum of symptoms, encompassing enduring sensations of sadness, diminished interest or joy, a sense of hopelessness, feelings of guilt, disruptions in sleep patterns, weight fluctuations, and cognitive impairments [4]. Owing to the diverse presentation patterns of Major Depressive Disorder (MDD), clinical practitioners frequently employ the Hamilton Depression Rating Scale (HAM-D) and the Beck Depression Inventory (BDI) as standard assessment tools to evaluate the symptoms exhibited by patients. Additionally, in research investigations, these scales are employed not only for symptom assessment but also as screening instruments to identify suitable subjects and healthy controls.

2.1 The Spatial Suppression Psychophysical Experiment

The spatial suppression psychophysical experiment is a frequently employed methodology for assessing the visual motion perception capabilities of participants. The visual paradigm of motion perception is indicative of the visual-motor processing within the higher-order occipital temporal region (MT) of the human brain. In this experimental paradigm, subjects are tasked with assessing the directional movement of a dynamic grating stimulus. Following a specified number of trials, dynamic indicators are computed to quantitatively depict the subject's visual-motor perception ability. This experimental approach has found application in investigating a spectrum of clinical phenomena, encompassing conditions such as schizophrenia, autism, and depression.

In a sequence of psychophysical experiments, Tadin's team note a counterintuitive phenomenon wherein augmenting the dimensions of a high-contrast moving pattern leads to heightened difficulty in perceiving its direction of motion and diminishes its efficacy as an adaptation stimulus [10].

Figure 2: Graphical Representation of Difficulty in Perceiving over Duration [10]

2.2 Research Significance of Psychophysical Experiment

Since then, this spatial suppression psychophysical experiment has been frequently used in the study of psychological disorders.

Mention any key studies done that has an impact on your project or solution development

Citations/References:

Using intext citations according to **Vancouver** referencing style, number [1] is allocated to each citation in the order in which it appears in the text.

Early-term Progress Report – Literature Review

- Every project is different, please discuss with your supervisor about what you write in this section.
- Keep it relevant and concise: Maximum **5 pages**
- Provide a systematic literature review of relevant published work which shaped your proposed solution.
- Provides a clear and precise description of your **progress** in the **last paragraph** of the report.

Literature Review Resources – MS Excel

	A	B	C	D	E
1	Title	Things that happen during composition according to authors	Methods	Comments / other	
2	bennet interviews with composers.pdf	- spontaneity in writing, sometimes not helped by formal teacher training - Germinal Idea >> Sketch >> First Draft >> Elaboration and Refinement >> Final Draft Copying - Revision? (see figure) - distractions can obliterate germinal idea - Germinal Ideas might be remembered later if they caused high arousal - Composition written in chunks 50,100,300 bars at one time - First draft often laid aside for a while - Snags can occur where progress not possible, cured by sleep or a brief walk - Germinal spontaneous, draft and elaboration more influenced by logico-deductive processes. - Germinal in trance like state... - not about depressed or suicidal cf. Bernstein. Plugging into brain! - meditate or boring things e.g. on train helps get germinal idea - Improvisation can help germination e.g. Stravinsky grasping accidents and developing them	Semi structured interviews, eight professional classical music composers. Not avant garde music, not chance composers	Focus on ideation. AI for ideation, but impersonal, note attachment to emotional states; Non-musicians unlikely to generate this way (more explore cf. Wu's model?) - could be study setup as not over time.	
3	Burnard-1995.pdf	- Prior knowledge of instruments drives instrument choices - Preferred common structural boundaries - most advanced students preferred task control over artistic decision making - those who preferred artistic decision activating sense of individuality, stimulation decision making and motivation --- others preferred the guidelines with a creative platform to stimulate decision making within. - Limited occurrences of critical review or evaluative editing activity --- rarely redrafted or refined final forms of compositions. - In absence of task imposed constraints students made their own	Different task designs over term. Year 11 (15-16 year old) independent girls school - electives in music, e.g., know notation. Composers diaries and reflective compositions, diaries (times) questionnaires and the compositions themselves.	focus on task design	
4	colab williamson .pdf	- Common for collaborations in pop music, but weirdly not so much in specialist settings. - Simon suggests two goals to guide composition teaching: to guide the composer and to get them over writers block. Colab could help with the latter. - Iterative cycle of listening, responding/offering and compromising - Listening and signifying central to improvised jazz at the foundation of their implicit knowledge - together more objective, not personally attached - The need to articulate the reasoning behind preferred decisions also helped clarify mutual goals and individual preferences. - Developed pre-compositional materials of mutual interest then explored - Colab helped validate ideas - Set each other tasks e.g. for the harmonizing - composer at outside has 'mental image' of their composition - problem proliferation and restructuring	Two jazz researchers self-analysing their material as researcher-practitioners	Reaching decisions seemed to be implicit as they were from similar backgrounds (both jazzers). If from different domains would this terminology have worked --- implicit needed to be articulated, or in moments of conflict describing backgrounds.	

Early-term Progress Report

Literature Review

Early-term Progress Report – Literature Review

What is Literature Review?

- ✓ Critical analysis
- ✓ Evaluation of previous research on a topic
- ✓ Organised
- ✓ Addressing a clearly articulated question (or questions)

What is NOT a Literature Review?

- ✗ A descriptive list
- ✗ Summaries of books/articles
- ✗ Exhausted bibliography of everything written on the topic
- ✗ Your arguments and ideas

Early-term Progress Report – Literature Review

“A detailed examination and analysis of scholarly articles, books, and other resources relevant to your project topic/scope”

- J. A. Luft, 2022

Early-term Progress Report – Literature Review:

1. Justifying that your project is worth doing.
2. Showing that you are well-aware of current literature related to your project area.
3. Show that your project is inventive and it is not just a repetition of existing research work done by others

Early-term Progress Report – Literature Review

As a general guideline, you may include the following (not limited to):

- Define the problem that you are addressing in your project.
- Explain the impact of the problem. Why you need to find a solution?
- Explain briefly if the problem is not resolved what will be the implications.
- Elaborate on how previous researchers have proposed solutions and what were their limitations.
- Relate your proposed solution with the existing methods/techniques/experiments
- Minimum **5 relevant research paper** references should be included.
(Use the **Cite Them Right Online** for referencing)

Early-term Progress Report Template Referencing

Vancouver Referencing Style

In-text citation:

- (a) Numeric [1]
- (b) in the order of appearance

(Cite Them Right Online)

References

Everything you cite from other sources should be properly referenced. The QMUL Faculty of Science and Engineering has identified the Vancouver referencing style (and its variations) as the recommended styles for project reports. Details about the referencing style and examples can be found online. <https://www.qmul.ac.uk/library/academic-skills/referencing-hub/referencing-guides-and-resources>

It is recommended to prepare the references with a reference management software, such as [End-Note](#) or [Zotero](#) to automate some of the processes of collecting, managing, and using references. Queen Mary Library Services promotes the use of [Cite Them Right Online](#) (login required) as a tool to support Queen Mary students in their referencing.

Formatting your in-text citations:

In Vancouver style, a number is allocated to each citation in the order in which it appears in the text.

This may be superscript ¹, round brackets (1), or square brackets [1]. **For the final year project report, we recommend the square brackets [1].**

Here are some examples in Vancouver referencing style:

Book Chapters:

Mouftah HT, Erol-Kantarci M, Husain Rehmani M. Transportation and Power Grid in Smart Cities: Communication Networks and Services. 1 ed: Wiley; 2018.

Journal Articles:

Basar E, Di Renzo M, De Rosny J, Debbah M, Alouini MS, Zhang R. Wireless Communications Through Reconfigurable Intelligent Surfaces. IEEE Access. 2019;7:116753–73.

Conference Papers:

Saputra YM, Hoang DT, Nguyen DN, Dutkiewicz E, Mueck MD, Srikanteswara S. Energy Demand Prediction with Federated Learning for Electric Vehicle Networks. 2019 IEEE Global Communications Conference (GLOBECOM). Waikoloa, HI, USA: IEEE; 2019. p. 1–6.

Project Early-term Progress Report

学院 School	International School	专业 Programme	Information and Computational Sciences (ICS)		
姓 Family name		名 First Name			
BUPT 学号 BUPT number		QM 学号 QM number		班级 Class	
论文题目 Project Title					
[This is a short report (no more than 5 pages) of literature review AND a summary of your progress. You must systematically review and analyse relevant sources, understand key theories, concepts, and methods related to your project, and identify any gaps or unresolved issues in the current literature that your project aims to address. You must also write a summary of the progress of the project so far. Please refer to the project handbook section 3.3 and 3.6.9. DELETE the above guidelines and WHITE SPACES]					
是否符合进度? On schedule as per GANTT chart? [YES/NO – if answer NO, give reasons and a plan to catch up. DELETE the content in square bracket and WHITE SPACES]					
下一步 Next steps: [Focus on the next immediate steps, i.e. until the next report. Refer to the identified Mid-Term Target as well as the Tasks in the Gantt Chart in the Specification Report – DELETE the content in square bracket and WHITE SPACES]					

Refer to the Mid-term Targets and identified the next steps which need to be completed before **Mid-term Viva** (March 2026)

Refer to Project Specification Report – Midterm Targets

中期目标 Mid-Term Target. It must be a measurable/ tangible outcome, E.g. prototype of software, hardware or simulation. This will be the criteria for Mid-Term Oral Exam (Viva).	
--	--

Early-term Progress Report – 5% Grade

- Your supervisor will grade your Early-term Progress Report

Assessment Area	Supervisor	Panel
Early-term Progress Check	5%	-
Mid-term Check	-	5%
Late-term Progress Check	5%	-
Final Marksheet	30%	55%
Total	40%	60%

Early-term Progress Report – 5% Grade

- Your supervisor will grade your Early-term Progress Report
- You must submit the Early-term Progress Report on time in order to appear in the Mid-term Viva
- You will receive your grades by the end of January 2026.
- Any students who needs to request for EC for Early-term Progress Report must apply before winter vacations.

Supervisor Log – Minimum Meetings

- Minimum **4 meetings** before 12th January 2025
- Keep track of each meeting using Supervisor Log
- Template available on QMPlus Module Page
- Student will record details of meetings with Supervisor
 - Date/Time
 - Form (MS Teams or in-person)
 - Key points
 - Task assigned and deadlines

论文题目 Project Title					
Please record supervision log using the format below: Date: dd-mm-yyyy Supervision type: face-to-face meeting/online meeting/email/messages/other (please specify) Summary:					
[These are examples, please DELETE them and add yours. DELETE this line.] Date: 01-11-2025 Supervision type: face-to-face meeting Summary: discussed the project specification Date: 11-11-2025 Supervision type: email Summary: received written feedback on the draft specification Date: 14-11-2025 Supervision type: online meeting Summary: discussed the draft specification					

Early-term Progress Report – Supervisor Feedback

- Before submitting the Early-term progress report on QM+, you must get feedback from your supervisor
- Your supervisor will provide feedback to your initial draft. You must improve your literature review according to their recommendations.
- It is important that you respond to their emails on time.
- Your supervisor will evaluate your dedication and commitment in the final report. Be proactive in communicating with them.
- Your supervisor will take winter holidays. Be mindful of their off days.

QHM6706 – Supervision Log Template

The screenshot displays the QM6706 Supervision Log Template interface. The top navigation bar is dark blue with the QM6706 logo, 'All Modules', and 'Help'. A search bar and notification icons are on the right. A vertical pink sidebar on the left contains icons for home, calendar, documents, and a house. The main content area has a top menu with 'Module', 'Settings', 'Participants', 'Grades', 'Reports', and 'More'. Below this, the 'Specification Report Submission' section features a pink box with the text 'Deadline: 17th November 2025 (23:59 Beijing Standard Time)'. The 'Supervision Log' section, indicated by a red arrow, contains a 'Project Supervision Log Template' document icon. A blue box below it states 'Please also refer to the Project Supervision Log Guideline (Project Handbook, Appendix 2)'. At the bottom, it shows '30.6 KB - Uploaded 22/10/25, 16:49'.

QHM6706 – Early-term Progress Report Webinar Slides

The screenshot shows a web interface for the QHM6706 module. At the top, there is a dark blue header with the QM6706 logo, navigation links for 'All Modules' and 'Help', and user icons for search, notifications, and a profile labeled 'AM'. Below the header is a light blue navigation bar with tabs for 'Module', 'Settings', 'Participants', 'Grades', 'Reports', and 'More'. The main content area is titled 'QHM6706-Student Handbook' and features a pink callout box with the text: 'Please familiarise yourself with this handbook, including a breakdown of the project and assessment.' Below this, there is a list of resources. The first resource is 'QHM6706 Project-Student Handbook', a PDF file of 658.0 KB. The second section is 'Important Resources', which includes two links: 'QMUL Guide on Referencing' and 'QMUL Student Guide to Generative AI'. The third section is 'Recording and Slides', which includes a link for 'Final Year Project - Introductory Session [10 Oct 2025]'. Below this link is a PDF file titled 'QHM6706-Final Year Project-Introductory Session' with a description: 'Here are the slides for QHM6706-Final Year Project-Introductory Session conducted on 10th October 2025.' A vertical pink sidebar on the left contains icons for home, calendar, documents, and other navigation options. A small chat bubble labeled 'Weix' is visible in the bottom right corner.
